Education

Bachelor of Science in Computer Science, VNUHCM-University of Science

2020 – 2024

Advanced Program in Computer Science

Overall GPA: 3.82/4.00

Research Experience

SELab VNUHCM-University of Science

2023 – 2024

Research Assistant - Supervised by Prof. Minh-Triet Tran and M.Sc. Thuc Nguyen-Quang

- Research on Sharpness Aware Minimization (SAM) - Identify the problems with SAM and lead the project.
- Investigate the performance difference between SAM and SGD in the presence of noisy labels.
- Propose various hypotheses about these differences, conduct empirical validations, and further enhance SAM's performance.

Research Interest

As AI systems become increasingly integral to our world, ensuring their safety and reliability has become a critical challenge. My current research focuses on **improving the safety and reliability of neural networks**. Current deep neural network training heavily relies on gradient-based algorithms, which, despite their effectiveness, can introduce biases when applied to **challenging datasets** such as noisy labels, out-of-distribution, or imbalanced classes. Motivated by these challenges, I focus on understanding and improving **training dynamics** to enhance **model generalization and robustness** in difficult settings. As a first step, I analyzed the behavior of perturbed gradient in Sharpness-Aware Minimization (SAM) under noisy label conditions. This work aims to slow down the fitting of noisy labels, improving robustness and contributing to safer AI systems. Currently, my work includes (but is not limited to):

1. **Understanding Training Dynamics:** identifying interesting phenomena that occur during training and establishing theories about them.
2. **Generalization and Robustness:** establishing both the theoretical and practical aspects of optimization to enhance generalization on out-of-distribution datasets, noisy labels, and imbalanced class datasets.
3. **LLMs and Diffusion models:** developing both theoretical and practical methods to enhance the performance of real-world applications.

Achievements

Awards

Awards for excellent achievements in Research activities at the university.	11/2024
Excellence scholarship for semester III.	9/2023

AI Competition

Third prize in AI Challenge Ho Chi Minh City, Event Retrieval from Visual Data. (Top 5/800)	11/2024
Consolation prize in AI Challenge Ho Chi Minh City, Event Retrieval from Visual Data. (Top 6/600)	10/2023
Consolation prize in AI Challenge Ho Chi Minh City, Event Retrieval from Visual Data.	10/2022
Top 12/69 on private test in FathomNet - FGVC10 workshop at CVPR 2023	4/2023

Competitive Mathematics

1 st prize in Ho Chi Minh City Mathematics Olympiad Competition	4/2020
Silver Medal in Southern Vietnam Mathematics Olympiad Competition	4/2019
Bronze Medal in Southern Vietnam Mathematics Olympiad Competition	4/2018

Skills

Programming Languages: Proficient in Python and experienced in writing C++, and Bash.

Technologies/Frameworks: Pytorch, HuggingFace, Linux

English: IELTS 7.0
